EXAMINER AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Attorney Fariborz Moazzam (Reg. No. 53,339) on 11/30/2009.

The application has been amended as follows:

Please amend claims 1, 8, 9, 16 and 23 as follows:

1. (Currently Amended) A method of authentication, the method comprising:

connecting a wireless network to an HTTP network using an HTTP proxy;

converting wireless network protocols from the wireless network into a protocol supported by the HTTP network;

comparing information, ~~including~~ consisting of [[a]] header types, a header order, and a header content, of a request by client logic with a known pattern of information for the client logic to determine whether a device making the request is authorized to receive at least one of content and software, the comparing accomplished by the

HTTP proxy, wherein the header types, the header order, and the header content strongly identify the client logic; and

when the information of the request matches the known pattern, causing the at least one of content and software to be communicated to the client logic in response to the request.

8. (Canceled)

9. (Currently Amended) An apparatus for authentication, the apparatus comprising:

a processor; and

logic that, when applied to the processor, results in connecting a wireless network to an HTTP network; converting wireless network protocols from the wireless network into a protocol supported by the HTTP network; comparing information, ~~including~~ consisting of ~~[[a]]~~ header types, a header order, and a header content, of a request by client logic with a known pattern of information for the client logic to determine whether a device making the request is authorized to receive at least one of content and software, wherein the header types, the header order, and the header content strongly identify the client logic; and when the information of the request matches the known pattern, causing the at least one of content and software to be communicated to the client logic in response to the request.

16. (Currently Amended) A method of authentication, the method comprising:

connecting a wireless network to an HTTP network using an HTTP proxy;

converting wireless network protocols from the wireless network into a protocol supported by the HTTP network;

comparing information, ~~including~~ consisting of ~~[[a]]~~ header types, a header order, and a header content, of a request by client logic with a known pattern of information for the client logic to determine whether a device making the request is authorized to receive at least one of content and software, the comparing accomplished by the HTTP proxy, wherein the header types, the header order, and the header content strongly identify the client logic; and

modifying the request information to either validate or invalidate the request according to whether the information of the request matches the known pattern.

23. (Canceled)

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The present invention is directed a method/system for authenticating HTTP applications, which comprising comparing information of a request by HTTP client logic (application) with a known pattern of information for the client logic, and when the information of the request matches the known pattern, the HTTP proxy server causes content and/or software to be communicated to the client in response to the request.

The closest prior art of record, Tran et al., (US Publication No 2003/0033524) teaches a method/system for authenticating a requesting client based on one or more client characteristics included in headers of the request (see Tran et al., [0027], [0049] and [0051]-[0052]).

However, Tran et al. fails to anticipate or render obvious the recited feature of comparing information, consisting of header types, a header order, and a header content, of a request by client logic with a known pattern of information for the client logic to determine whether a device making the request is authorized to receive at least one of content and software, and wherein the header types, the header order, and the header content strongly identify the client logic, as similarly recited in independent claims 1, 9 and 16.

These features, together with the other limitations of the independent claims are novel and non-obvious over the prior art of record. The dependent claims 2, 4-7, 10, 11, 13-15, 17 and 19-22 being definite, enabled by the specification, and further limiting to the independent claim, are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
